CLAIM AMENDMENTS

IN THE CLAIMS

This listing of the claims will replace all prior versions, and listing, of claims in the application or previous response to office action:

1. **(Currently Amended)** A method for reporting volume information on one or more redundant arrays of independent disks (RAID) in an information handling system having one or more storage device drives, the method comprising:

identifying a software RAID volume on the information handling system;

correlating the RAID volume to a storage device drive;

determining an operating state of the identified RAID volume;

determining an operating state of the correlated storage device drive;

comparing the determined operating state of the identified RAID volume with the determined operating state of the storage device drive;

based on the result of the comparison, determining a worst case operational state between the identified RAID volume and the storage device drive; and

operating a chassis LED in accordance with the worst case operational state.

2. (Previously Presented) The method of Claim 1, further comprising:

determining, prior to operating the chassis LED in accordance with the worst case operational state, whether a current worst case operational state is different than a last reported worst case operational state; and

reporting the current worst case operational state to the LED driver in response to a difference between the current worst case operational state and the last reported worst case operational state.

3. (Previously Cancelled)
